

Canteen Management with EDUMAAT

SMARTER STUDENT LIFECYCLE—SIMPLIFIED AND CENTRALIZED

Bringing Efficiency to Campus Dining

A campus canteen does more than serve meals—it plays a vital role in student life. Whether it's a short break between classes or a quick meal after a long lecture, students and staff rely on the canteen every day.

But managing a busy canteen—especially in large institutions—can be a challenge. Long queues, delayed service, billing confusion, stock shortages, and manual registers can slow down operations and reduce satisfaction.

The Canteen Management Module of EDUMAAT ERP is designed to fix these problems. It helps institutions manage their canteen digitally—handling everything from menu management to billing, stock control, and student transactions—all in one system.

A Smart, Cashless Experience for Students and Staff

With EDUMAAT, your institution can create a fully digital canteen experience. Students and staff can pre-order meals or snacks using their ID cards, mobile apps, or smart cards. The system tracks all orders and payments automatically.

This cashless model speeds up service, avoids handling errors, and creates a safer, more hygienic process—especially important in today's health-conscious environment.

Canteen credits can be linked to the student's profile or managed by prepaid balances. Institutions can even allow parents to top up their child's canteen wallet online and track their food spending.

Fast and Organized Canteen Operations

Canteen staff can manage their work more efficiently using EDUMAAT's canteen dashboard. Menu items can be updated daily with prices, stock availability, and serving limits.

At the counter, billing becomes faster with barcode or item selection systems. Orders are tracked in real time. The system keeps record of:

- Items sold
- Quantity remaining
- Daily revenue
- Staff meals and student orders

This reduces billing time, prevents over-ordering, and ensures faster turnaround during peak lunch hours.

Inventory and Stock Monitoring

One of the biggest challenges in running a canteen is keeping track of ingredients and stock levels. EDUMAAT solves this by linking the canteen menu with an internal inventory system.

As items are sold, raw materials (like rice, vegetables, oil, etc.) are automatically deducted from the stock. If an item is running low, the system notifies the kitchen or store manager to restock in time.

This helps institutions:

- Reduce food wastage
- Maintain consistent meal quality
- Control kitchen expenses
- Prevent misuse or theft of supplies

Detailed stock and usage reports are available at any time.

Integration Across EDUMAAT ERP

The Canteen Management Module works closely with other parts of EDUMAAT:

- **Student Management:** Canteen usage is linked to each student profile
- **Fees/Wallet Module:** Canteen payments are integrated with online wallets or parent top-ups
- **Inventory & Asset Management:** All raw materials and kitchen supplies are tracked
- **Communication Module:** Send alerts about low balances, new items, or order updates

This full integration avoids duplicate work and gives administrators full visibility into canteen performance.

Reports and Insights That Help You Improve
EDUMAAT generates real-time reports to help the institution make informed decisions. Some of the most used reports include:

The Canteen Management Module from EDUMAAT is more than a billing tool. It is a complete digital solution that helps institutions serve better food, faster, and more efficiently.

It creates a smooth experience for students and staff while giving the administration full control over billing, stock, and operations.

With this module, your canteen becomes:

- Faster in service
- Smarter in inventory
- Safer in transactions
- More enjoyable for the campus community

It's time to transform your campus canteen into a modern, tech-powered dining space—with EDUMAAT.
