LMS (Quiz, Course, Interactive Meeting) with EDUMAAT

SMARTER STUDENT LIFECYCLE–SIMPLIFIED AND CENTRALIZED

The New Era of Teaching and Learning

Education is changing rapidly. Classrooms are no longer confined to four walls. Learning today is flexible, digital, and interactive. Students expect content they can access anytime, from anywhere. Teachers want tools that go beyond chalk and talk. And institutions are looking for smart systems that support both in-person and online learning.

That's why the LMS (Learning Management System) Module in EDUMAAT ERP was created—to bring together quizzes, digital courses, and interactive meetings in one powerful platform.

It helps schools and colleges deliver education in a modern, engaging, and effective way.

Empowering Teaching Through Digital Courses
With EDUMAAT's LMS, institutions can offer structured, subject-based courses directly through the system. These digital courses can include:

- Lesson plans
- Recorded videos
- Reference materials
- Images, PDFs, or PowerPoint slides
- Practice exercises and assignments

Teachers can upload, organize, and share their content with specific classes or groups. Students can access these resources at their own pace, on any device, and revisit them as many times as needed.

This flexibility supports self-paced learning, helps students revise topics before exams, and ensures that no one misses out–especially in hybrid or remote setups.

Engaging Students Through Quizzes and Assessments
Quizzes are a powerful tool to test understanding, reinforce learning, and keep students engaged. EDUMAAT's LMS includes a built-in Quiz Builder, where teachers can create subject-specific quizzes using various question types like:

- **Multiple choice questions (MCQs)**
- **True or false**
- **Match-the-following**
- **Fill in the blanks**
- **Short answers**

Each quiz can be customized with time limits, attempt rules, randomization, and grading logic. Teachers can set pass marks, assign quizzes to specific classes, and instantly view student scores.

Students receive immediate feedback, helping them learn from mistakes and improve performance. Over time, teachers can analyze quiz results to identify learning gaps and tailor their teaching accordingly.
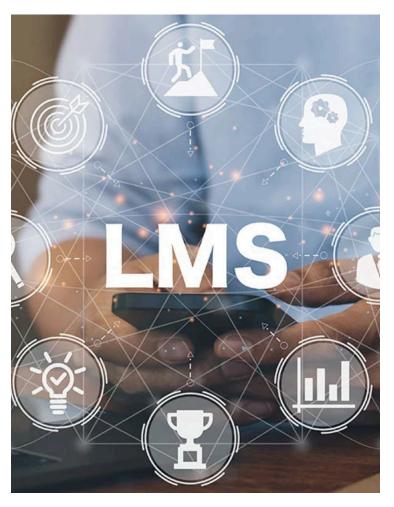

Real-Time Learning with Interactive Meetings
In addition to static content and quizzes, EDUMAAT LMS supports live, interactive learning sessions through integrated video conferencing tools. Institutions can schedule and conduct:
- Live classes
- Webinars and guest lectures
- Doubt-clearing sessions
- Group discussions and presentations

Teachers can share their screen, use a digital whiteboard, take attendance, and interact with students in real time. Meetings can be recorded and stored for future viewing.
This feature is especially valuable in blended learning models where both classroom and online teaching are combined to offer a richer, more engaging academic experience.

Student-Centered Learning Environment
With EDUMAAT LMS, students are not just passive listeners. They become active participants in their own learning journey. From logging in to check the day's video lessons, to taking a quiz or joining a live discussion—everything is structured to support growth, understanding, and performance.

Key features for students include:
- Personalized dashboards showing assigned courses, completed tasks, and upcoming sessions
- Instant access to course materials and recordings
- Notifications for quiz deadlines, new uploads, or live class schedules
- Certificates or badges after completing course milestones (optional)

This builds student confidence, improves digital learning habits, and keeps motivation high throughout the academic year.

Teacher Tools for Better Instruction

Teachers benefit from easy-to-use tools that simplify their workload:
- Upload or reuse course materials across batches
- Track student engagement with course content
- Monitor quiz performance by student or class
- Schedule meetings and send automatic reminders
- Generate reports on student progress and quiz analytics

The system saves time for teachers while improving the quality of instruction delivered.

Integration with Other EDUMAAT Modules

EDUMAAT's LMS works in harmony with the rest of your ERP system:
- Attendance Module tracks student participation in live sessions
- Examination Module syncs with LMS quizzes for continuous evaluation
- Student Management maintains learning records for each student
- Communication Module sends automated updates about course uploads or quiz results

This makes EDUMAAT a complete learning and administration platform—connected, convenient, and reliable.

With EDUMAAT LMS, learning becomes accessible, interactive, and measurable—for every student, everywhere.
