Library Management with EDUMAAT

SMARTER STUDENT LIFECYCLE—SIMPLIFIED AND CENTRALIZED

A Smarter Way to Manage Your Library

The library is the heart of any educational institution. It's not just a place where books are stored—it's where students explore, learn, and grow beyond the classroom. But managing a modern library requires more than just shelves and catalogs.

With hundreds (or thousands) of books, journals, digital resources, and student requests, librarians need a system that is efficient, error-free, and easy to manage.
That's exactly what the Library Management Module of EDUMAAT ERP is built for.

It turns your library into a smart, automated knowledge hub—where every book is traceable, every user is managed digitally, and every operation is streamlined.

From Cataloging to Checkout—Everything in One Place
The EDUMAAT Library Management Module covers all daily library tasks in one system. Books and journals are cataloged digitally with complete details—title, author, category, publisher, ISBN, and shelf location.

soon as a new book arrives, it's added to the system and made searchable for students and staff. Students can search for books using filters like subject, class level, author, or publication year. They can see availability, request reservations, and even get reminders when books are due—all through the web or mobile interface.

Librarians no longer need to maintain separate registers or spreadsheets. Book check-ins, check-outs, overdue tracking, and renewals are all handled automatically within the EDUMAAT system.

Tracking Every Book, Every Borrower, Every Time With EDUMAAT, every transaction is recorded. The system maintains a complete record of who borrowed which book, when it was issued, and when it's due for return. If a book is late, the system sends reminders and calculates fines if applicable.

Books can also be reserved in advance, and the system notifies the student when it's ready for pickup. EDUMAAT even supports barcode or RFID scanning, making it faster for the librarian to manage circulation during busy hours.

All of this means better organization, fewer missing books, and faster service for students and staff.

Managing Digital and Physical Resources

Today's libraries are more than just physical books. They also include e-books, PDFs, audio resources, and research materials. EDUMAAT allows institutions to manage both physical and digital collections in the same platform.

Digital files can be uploaded and linked to specific topics or course materials. Students can log in and access these resources based on their role and class level. This not only enhances learning but also makes your library more accessible—even outside of school hours.

User-Friendly for Everyone: Students, Librarians, and Admins

The system is built with ease of use in mind. Students can:

- Search and reserve books online
- Check their borrowing history
- Get alerts about return dates
- Access digital reading materials

Librarians can:

- **Track inventory in real time**
- **Process issues and returns faster**
- **Manage reservations, fines, and renewals**
- **Add or remove books and update records**

Admins and management can:

- Monitor usage patterns
- Generate reports on book circulation
- Track most-read titles and user activity
- Plan purchases based on actual demand

It's a complete ecosystem designed to benefit every user.

Automated Reports and Insights

EDUMAAT's library module includes powerful reporting tools. Institutions can generate reports on:

- Most borrowed books
- Books by subject or class level
- Students with overdue returns
- Total inventory value
- Monthly borrowing statistics

These reports help in decision-making, whether it's budgeting for new books, planning book fairs, or identifying underused resources.

Integrated with the Full EDUMAAT ERP

The Library Module doesn't work in isolation—it connects with other EDUMAAT modules for a seamless experience.

- Students' book borrowing history appears in their Student Profile
- Fines for lost or overdue books are added to their Fees Management
- Staff access is linked with their HR or Role Management
- Notifications go through the Communication Module

This integration makes the library a fully connected part of your school or college's digital campus.
